In the drawings:

The attached sheet of drawings includes changes to Figure 1. This sheet replaces the

original sheet including Figure 1. In Figure 1, previous reference number 180 has been

replaced by reference number 100. Also, the term "automated assistant" has been added to

block 100.

Attachment: Replacement Sheet

**Annotated Sheet Showing Changes** 

Atty Docket No. 42P9765X Application No. 09/895,557 2

## Remarks

Applicant respectfully requests reconsideration of this application as amended.

Claims 1, 11, 21, 27, and 31 have been amended. No claims have been cancelled or added.

Therefore, claims 1-33 and 36-39 are presented for examination.

## 35 U.S.C. §102(e) Rejection

Claims 1, 3-6, 10, 11, 13-16, 20-25, 27-29, 31-32, 36 and 38 stand rejected under 35 U.S.C. §102(b) as being anticipated by Horvitz et al. (U.S. Pub. No. 2003/0046421).

Applicant submits that the present claims are patentable over Horvitz et al.

Horvitz discloses a system that provides controls and displays for acquiring user preferences, inspecting behavior, and guiding learning and decision policies of an adaptive communications prioritization and routing system. (Horvitz at paragraph [0007].) More specifically, the system enables a plurality of information associated with electronic messages to be automatically prioritized by a message urgency system for transmittal to a user or system. The message urgency system can employ classifiers that can be explicitly and/or implicitly trained to prioritize or triage one or more received messages according to a learned importance to the user. (Horvitz at Abstract.)

## Claim 1 recites:

A method, comprising:

providing a digital assistant having an event detector and an agent selector;

receiving by the event detector information of an event from an information provider;

determining by the event detector a level of importance of the event relative to a user of the digital assistant;

weighing by the agent selector the level of importance against an intrusion to the user if the digital assistant handles the event itself, wherein the intrusion to the user is determined by rules specified by the user;

handling by the digital assistant the event without contacting the user if the level of importance of the event is greater than or equal to a first threshold and less than or equal to a second threshold, the handling including the digital assistant responding to an originator of the event in lieu of the user; and

contacting by the digital assistant the user in order for the user to resolve the event if the level of importance is greater than the second threshold.

Applicant submits that Horvitz does not disclose or suggest handling by the digital assistant the event without contacting the user if the level of importance of the event is greater than or equal to a first threshold and less than or equal to a second threshold, the handling including the digital assistant responding to an originator of the event in lieu of the user, as recited by claim 1. The Office Action asserts that Horvitz discloses this feature at Figure 42 "whereby the component may decide, based on the priority of the message, to reply to the sender of email message or simply forward the message". (Office Action mailed 5/23/06 at pg. 4, pt. B.)

However, nowhere in the description of Figure 42 at paragraphs [0275] and [0276] of Horvitz is there disclosed handling by the digital assistant the event without contacting the user if the level of importance of the event is greater than or equal to a first threshold and less than or equal to a second threshold, the handling including the digital assistant responding to an originator of the event in lieu of the user. The description in Horvitz only provides for replying to a sender of the text based on a very general "routing criteria". (Horvitz at paragraph [0275].) Furthermore, Applicant can find no disclosure or suggestion of such a feature anywhere else in Horvitz. Therefore, claim 1, as well as its dependent claims, is patentable over Horvitz.

Claims 11, 21, 27, and 31 also recite, in part, <u>handling by the digital assistant the</u> event without contacting the user if the level of importance of the event is greater than or

equal to a first threshold and less than or equal to a second threshold, the handling including the digital assistant responding to an originator of the event in lieu of the user. As discussed above, Horvitz does not disclose or suggest such a feature. Therefore, claims 11, 21, 27, and 31, as well as their respective dependent claims, are patentable over Horvitz.

## 35 U.S.C. §103(a) Rejection

Claims 2, 12, 37 and 39 stand rejected under 35 U.S.C. §103(a) as being unpatentable over Horvitz et al. in view of what was well known in the art. Claim 2 depends from independent claim 1, claim 12 depends from independent claim 11, and claims 37 and 39 depend from independent claim 31. As previously discussed, claims 1, 11, and 31 are patentable over Horvitz. As dependent claims necessarily include all of the limitations of their independent claims, claims 2, 12, 37, and 39 are also patentable over Horvitz, even in view of what was well known in the art.

Claims 7, 17, 26 and 30 stand rejected under 35 U.S.C. §103(a) as being unpatentable over Horvitz et al. in view of Fisher et al. (U.S. Patent No. 5,835,896). Claim 7 depends from independent claim 1, claim 17 depends from independent claim 11, claim 26 depends from independent claim 21, and claims 30 depends from independent claim 27. As previously discussed, claims 1, 11, 21, and 27 are patentable over Horvitz. Fisher does not remedy the deficiencies of Horvitz as far as disclosing the claims of the present application.

As a result, claims 7, 17, 26, and 30 are also patentable over Horvitz, even in view of Fisher.

Atty Docket No. 42P9765X Application No. 09/895,557 Claims 8-9, 18-19 and 33 stand rejected under 35 U.S.C. §103(a) as being

unpatentable over Horvitz et al. Claims 8-9 depend from independent claim 1, claim 18-19

depend from independent claim 11, and claim 33 depends from independent claim 31. As

previously discussed, claims 1, 11, and 31 are patentable over Horvitz. As a result, claims 8-

9, 18-19, and 33 are also patentable over Horvitz, even in view of what was well known in

the art.

Applicant respectfully submits that the rejections have been overcome and that the

claims are in condition for allowance. Accordingly, applicant respectfully requests the

rejections be withdrawn and the claims be allowed.

The Examiner is requested to call the undersigned at (303) 740-1980 if there remains

any issue with allowance of the case.

Applicant respectfully petitions for an extension of time to respond to the outstanding

Office Action pursuant to 37 C.F.R. § 1.136(a) should one be necessary. Please charge our

Deposit Account No. 02-2666 to cover the necessary fee under 37 C.F.R. § 1.17(a) for such

an extension.

Please charge any shortage to our Deposit Account No. 02-2666.

Respectfully submitted,

BLAKELY, SOKOLOFF, TAYLOR & ZAFMAN LLP
